Background vs Decision-making Planning

Background planning

Learn how to act in any situation

Optimisation variables: θ

Parameters of policy $\pi_{\theta}(s)$, value $Q_{\theta}(s, a)$, etc

$$J(\theta) = \mathbb{E}_{s_0} \left[\sum_{t=0}^H r(s_t, \pi_{\theta}(s_t)) \right]$$

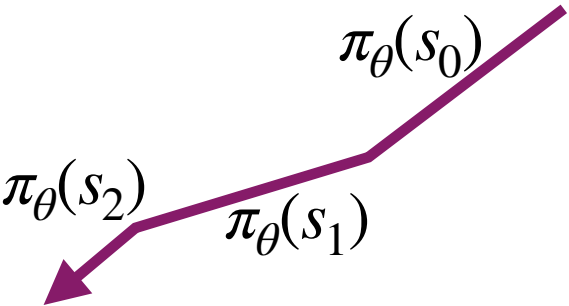

Find best activity for retirement

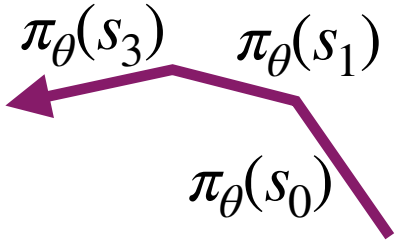

Optimisation variables: a_0, \dots, a_H

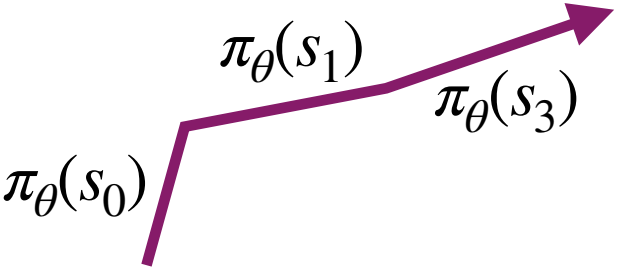

Sequences of actions (and may be also states)

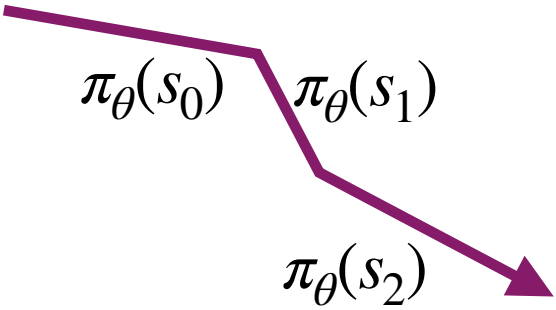

$$J(a_0, \dots, a_H) = \sum_{t=0}^H r(s_t, a_t)$$

Decision-making planning

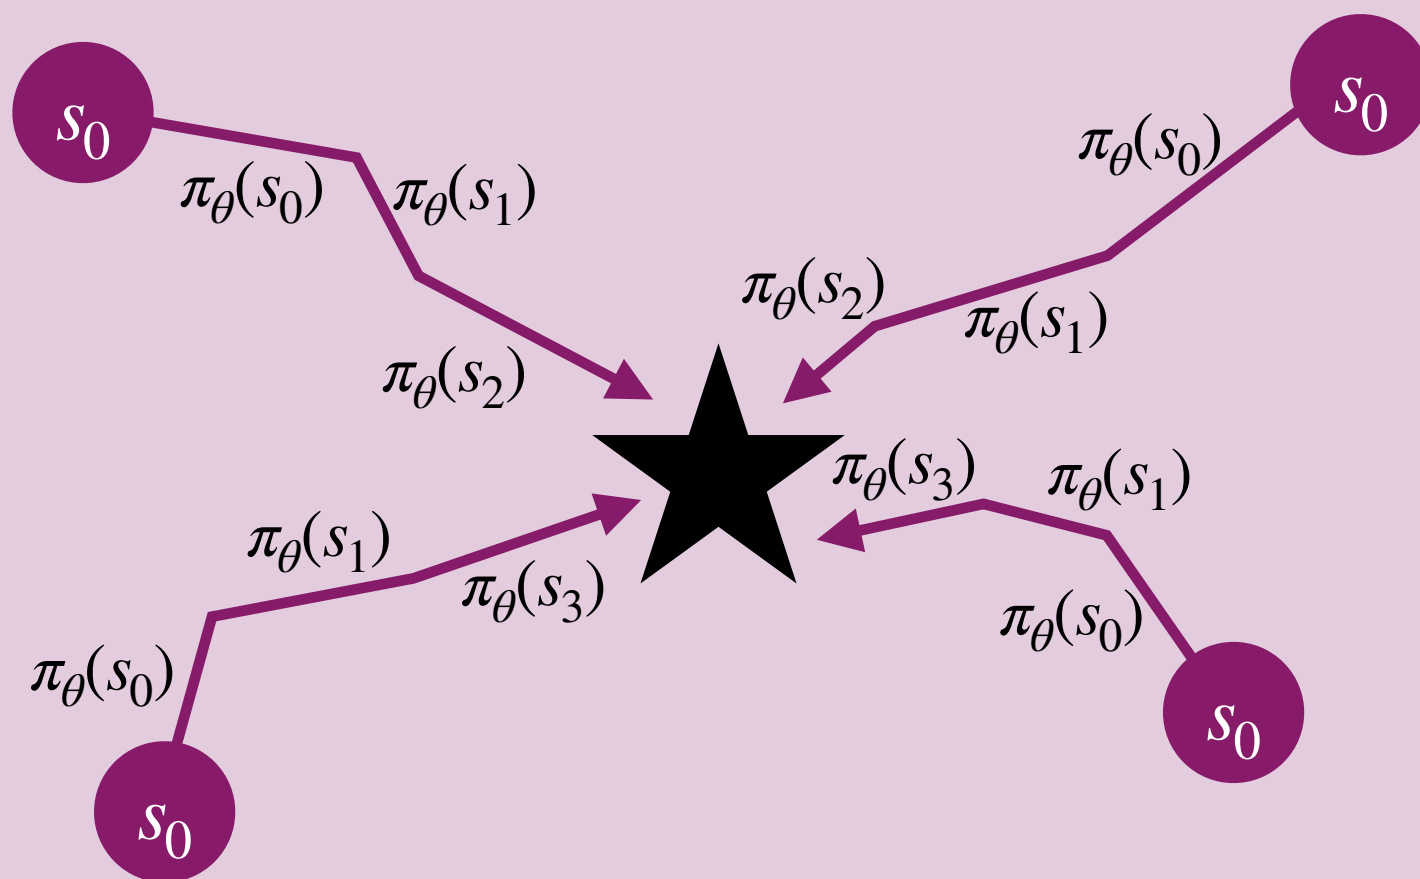

So

Background vs Decision-time Planning

Background planning

Learn how to act in any situation

Optimisation variables: θ

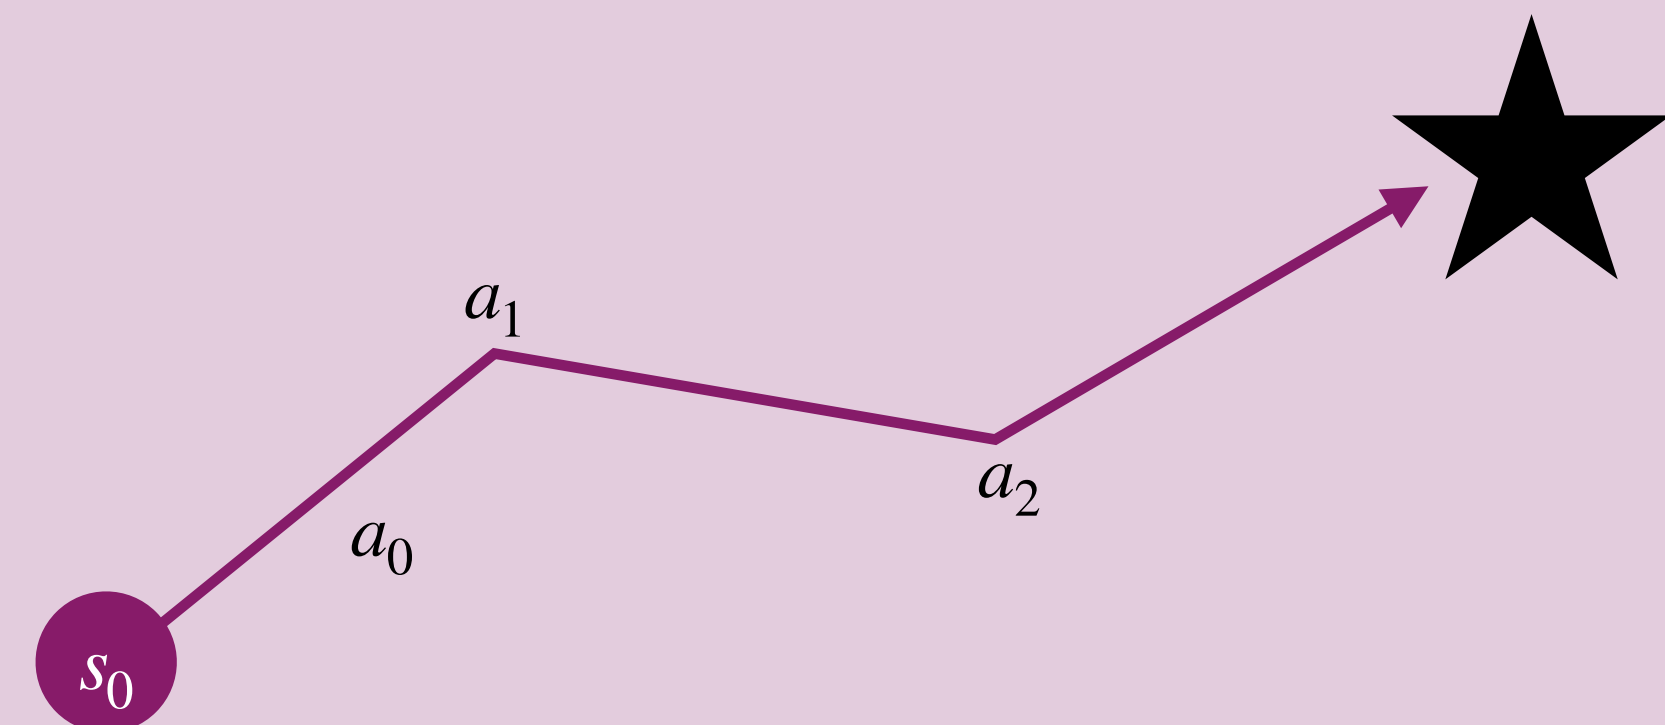

Parameters of policy $\pi_\theta(s)$, value $Q_\theta(s, a)$, etc

$$J(\theta) = \mathbb{E}_{s_0} \left[\sum_{t=0}^H r(s_t, \pi_\theta(s_t)) \right]$$
