Insights and Takeaways

i

Q

R

L

• Straightforward

- Compatible with any model-free RL algorithm

• Fast (no decision-time planning)

• Strong performance in DM Control

• Representational task agnostic

- Quantization (empirically) prevents dimensional collapse

Insights

• Learning high-dimensional state (d=512/1024) makes Q-learning easier

• Difficulty of Q-learning is due to complex high-dimensional observations

Insights

- Learning a high-dimensional latent state ($d=512/1024$) makes Q-learning easier...
- Difficulty of Q-learning is due to complex dynamics, not high-dimensional observations
